

Computing Overview written by Jo Steenkamp, Subject leader

Curriculum Intent

At Elton C of E Primary School, we understand that computers and other digital devices play a key part in our pupils' lives. Therefore, we want to model and educate our pupils on how to use technology positively, responsibly and safely. We want our pupils to be creators in computing, not merely consumers of technology and our carefully structured curriculum encompassing computer science, information technology and digital literacy reflects this.

We ensure that our curriculum gives every child the opportunity to become digitally literate so that they are able to express themselves and develop their ideas through information and computer technology – at a level suitable for the future workplace and as active participants in a digital world.

Curriculum Implementation

To implement this, we use the Purple Mash Computing Scheme of Work.

Purple Mash is a comprehensive suite of online learning tools and content, designed specifically for primary school children. The resources, games and creative tools on Purple Mash ensure that we are covering the full breadth and depth of the Primary Computing Curriculum. Purple Mash is a safe environment that does not require any downloading nor allow interaction with people online. Children cannot make any financial transactions. At its heart is a focus on equipping children with the skills they need to stay safe now and in the future when interacting with technology.

The **Purple Mash Scheme of Work** is a vital tool because not only does it provide clear coverage of the computing curriculum and the resources and software required to implement the desired skills, but it also provides ongoing support and CPD enabling all teachers to deliver engaging and appropriately challenging computing lessons for all pupils. All teachers at Elton C of E Primary School are Purple Mash trained.

Computing teaching, using the **Purple Mash Scheme of Work** at Elton C of E Primary School delivers the requirements of the National Curriculum through half-termly units of work that are delivered in weekly lessons (in addition to computing skills being embedded across the curriculum.)

The children at Elton C of E Primary School are taught computing lessons on a weekly basis in **single year groups**. This ensures consistency and progression throughout the school.

Curriculum Impact

At Elton C of E Primary School, pupils are highly engaged and motivated in computing lessons. They use technology safely, and in an age-appropriate manner; they can identify risks and know what to do to keep themselves safe online. They participate enthusiastically and are proactive in taking their learning outside of the classroom, creating their own projects and using the tools available to them to extend their learning. We intend that the impact of the teaching and learning of computing at our school ensures children make at least good progress from their starting points, and attain in-line with or better than national expectations.

We also hope that the engaging and challenging computing opportunities our pupils experience will develop a life-long love of technology and provide them with a wealth of opportunities in the future.

Extracurricular opportunities

- In addition to the teaching of computing within the school day itself, we further encourage the love for all things computing through our weekly and termly homework. Weekly homework is set for the children using Microsoft Teams and regularly includes online activities using Edshed and Times-tables Rockstars.
- On a termly basis, our 'Homework Matters' assignment also encourages the use of digital technology as a means to present our homework projects, such as research, presentations and film.
- The school is a recent winner of the regional First Lego coding and robotics trophy.
- We are currently working with STEM ambassadors in the Green Goblin competition.
- Children with an interest in technology are invited to work alongside the sound and lighting engineers in our whole school production

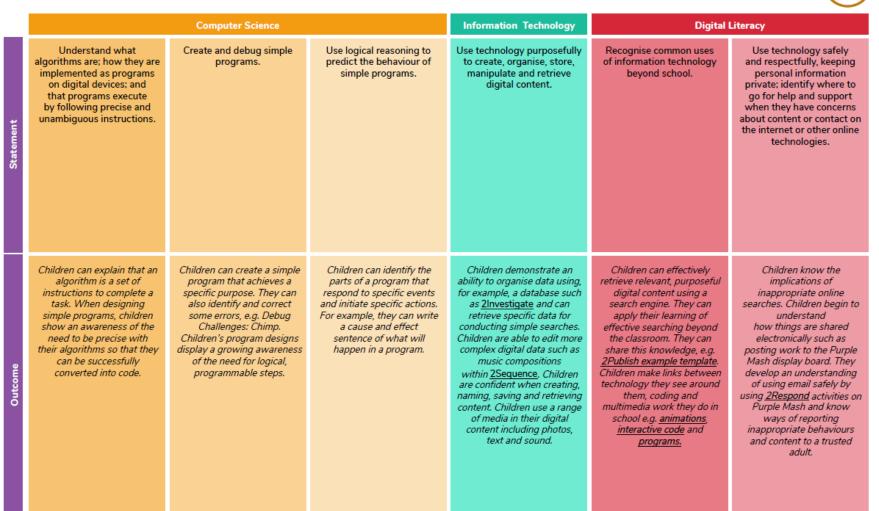

Computing Progression N.C. Statements KS1 Year 1

		Computer Science		Information Technology	Digital	Literacy
Statement	Understand what algorithms are; how they are implemented as programs on digital devices; and that programs execute by following precise and unambiguous instructions.	Create and debug simple programs.	Use logical reasoning to predict the behaviour of simple programs.	Use technology purposefully to create, organise, store, manipulate and retrieve digital content.	Recognise common uses of information technology beyond school.	Use technology safely and respectfully, keeping personal information private; identify where to go for help and support when they have concerns about content or contact on the internet or other online technologies.
Outcome	Children understand that an algorithm is a set of instructions used to solve a problem or achieve an objective. They know that a computer program turns an algorithm into code that the computer can understand	Children can work out what is wrong with a simple algorithm when the steps are out of order, e.g. The Wrong Sandwich in Purple Mash and can write their own simple algorithm, e.g. Colouring in a Bird activity. Children know that an unexpected outcome is due to the code they have created and can make logical attempts to fix the code, e.g. Bubbles activity in 2Code.	When looking at a program, children can read code one line at a time and make good attempts to envision the bigger picture of the overall effect of the program. Children can, for example, interpret where the turtle in 2Go challenges will end up at the end of the program.	Children are able to sort, collate, edit and store simple digital content e.g. children can name, save and retrieve their work and follow simple instructions to access online resources, use Purple Mash <u>2Quiz</u> example (sorting shapes), <u>2Code</u> design mode (manipulating backgrounds) or using pictogram software such as <u>2Count</u> .	Children understand what is meant by technology and can identify a variety of examples both in and out of school. They can make a distinction between objects that use modern technology and those that do not e.g. a microwave vs. a chair.	Children understand the importance of keeping information, such as their usernames and passwords, private and actively demonstrate this in lessons. Children take ownership of their work and save this in their own private space such as their My Work folder on Purple Mash.

c	Information Technology		Digital Literacy		
Design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts.	n to explain how some vith simple algorithms ous work and to detect	Understand computer networks, including the internet; how they can provide multiple services, such as the World Wide Web, and the opportunities they offer for communication and collaboration.	Use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content.	Select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information.	Use technology safely, respectfully and responsibly; recognise acceptable/ unacceptable behaviour; identify a range of ways to report concern about content and contact.
Children can turn a simple real-life situation into an algorithm for a program by deconstructing it into manageable parts. Their design shows that they are thinking of the desired task and how this translates into code. Children can identify an error within their program that prevents it following the desired algorithm and then fix it.	and their programs show that they are thinking of the structure of a program in logical, mers achievable steps and absorbing some new knowledge of coding are structures. For example, repetition and use of the timers. They make good mer attempts to 'step through' more complex code in order to identify	Children can list a range of ways that the Internet can be used to provide different methods of communication. They can use some of these methods of communication, e.g. being able to open, respond to and attach files to emails using 2Email. They can describe appropriate email conventions when communicating in this way.	Children can carry out simple searches to retrieve digital content. They understand that to do this, they are connecting to the internet and using a search engine such as Purple Mash search or internet-wide search engines.	Children can collect, analyse, evaluate and present data and information using a selection of software, e.g. using a branching database <u>[2Question]</u> , using software such as <u>2Graph</u> . Children can consider what software is most appropriate for a given task. They can create purposeful content to attach to emails, e.g. <u>2Respond</u> .	Children demonstrate the importance of having a secure password and not sharing this with anyone else. Furthermore, children can explain the negative implications of failure to keep passwords safe and secure. They understand the importance of staying safe and the importance of their conduct when using familiar communication tools such as <u>2Email</u> in Purple Mash. They know more than one way to report unacceptable content and contact.

Computing Progression N.C. Statements KS2 Year 4

	Computer Science				Information Technology		Digital Literacy
Statement	Design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts.	Use sequence, selection and repetition in programs; work with variables and various forms of input and output.	Use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs.	Understand computer networks, including the internet; how they can provide multiple services, such as the World Wide Web, and the opportunities they offer for communication and collaboration.	Use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content.	Select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information.	Use technology safely, respectfully and responsibly; recognise acceptable/ unacceptable behaviour; identify a range of ways to report concern about content and contact.
Outcome	When turning a real-life situation into an algorithm, the children's design shows that they are thinking of the required task and how to accomplish this in code using coding structures for selection and repetition. Children make more intuitive attempts to debug their own programs.	Children's use of timers to achieve repetition effects are becoming more logical and are integrated into their program designs. They understand 'IF statements' for selection and attempt to combine these with other coding structures including variables to achieve the effects that they design in their programs. As well as understanding how variables can be used to store information while a program is executing, they are able to use and manipulate the value of variables. Children can make use of user inputs and outputs such as 'print to screen'. e.g. 2Code.	Children's designs for their programs show that they are thinking of the structure of a program in logical, achievable steps and absorbing some new knowledge of coding structures. For example, 'IF' statements, repetition and variables. They can trace code and use step-through methods to identify errors in code and make logical attempts to correct this. In programs such as Logo, they can 'read' programs with several steps and predict the outcome accurately.	Children recognise the of hardware which allow computers to join and form a network. Their ability to understand the online safety implications associated with the ways the internet can be used to provide different methods of communication is improving.	Children understand the function, features and layout of a search engine. They can appraise selected webpages for credibility and information at a basic level.	Children are able to make improvements to digital solutions based on feedback. Children make informed software choices when presenting information and data. They create linked content using a range of software such as <u>2Connect</u> and <u>2Publish+</u> . Children share digital content within their community, i.e. using Virtual <u>Display</u> <u>Boards</u>	Children can explore key concepts relating to online safety using concept mapping such as <u>2Connect</u> . They can help others to understand the importance of online safety. Children know a range of ways of reporting inappropriate content and contact.

		Compute	r Science	Information Technology		Digital Literacy	
Statement	Design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts.	Use sequence, selection and repetition in programs; work with variables and various forms of input and output.	Use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs.	Understand computer networks, including the internet; how they can provide multiple services, such as the World Wide Web, and the opportunities they offer for communication and collaboration.	Use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content.	Select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information.	Use technology safely, respectfully and responsibly; recognise acceptable/ unacceptable behaviour; identify a range of ways to report concern about content and contact.
Outcome	Children are able to turn a more complex programming task into an algorithm by identifying the important aspects of the task (abstraction) and then decomposing them in a logical way using their knowledge of possible coding structures and applying skills from previous programs. Children test and debug their program as they go and use logical methods to identify the cause of bugs, demonstrating a systematic approach to try to identify a particular line of code causing a <u>problem</u> .	Children translate algorithms that include sequence, selection and repetition into code and their own designs show that they are thinking of how to accomplish the set task in code utilising such structures, including nesting structures within each other. Coding displays an improving understanding of variables in coding, outputs such as sound and movement, inputs from the user of the program such as button clicks and the <u>value of</u> <u>functions</u> .	Children are able to interpret a program in parts and can make logical attempts to put the separate parts of a complex algorithm together to explain the <u>program as a</u> <u>whole</u> .	Children understand and can explain in some depth the difference between the internet and the World Wide Web. Children know what a WAN and LAN are and can describe how they access the <u>Internet in</u> <u>school</u> .	Children readily apply filters when searching for digital content. They are able to explain in detail how credible a webpage is and the information it contains. They compare a range of digital content sources and are able to rate them in terms of content quality and accuracy. Children use critical thinking skills in everyday use of online communication.	Children make clear connections to the audience when designing and creating digital content. The children design and create their own blogs to become a content creator on the Internet, e.g. <u>2Blog</u> . They are able to use criteria to evaluate the quality of digital solutions and are able to identify improvements, making some refinements.	Children demonstrate the safe and respectful use of a range of different technologies and online services. They identify more discreet inappropriate behaviours through developing critical thinking, e.g. <u>2Respond</u> activities. They recognise the value in preserving their privacy when online for their own and other people's safety.
